

Nike Sasquatch Sumo2 Driver

The new SasQuatch SUMO 2 driver features a powerful new square geometry to deliver the HIGHEST MOI in golf. SUMO 2 stands for Super Moment of Inertia Squared. To achieve this radical geometry, Nike utilizes a multi-material construction with a composite crown to save weight vs. a conventional titanium crown. The SUMO 2 is the ultimate driver for distance, forgiveness, and accuracy.

Nike Slingshot 4D Irons

The Slingshot irons by Nike Golf complete the company's iron lineup by offering a game improvement model to complement the Forged Pro Combo and Forged Blade models. The Slingshots were easy to hit from the first swing and receive high marks for forgiveness, distance, and playability. Golfers used to the feel from forged or soft carbon cast irons will notice a harsher feel with the Slingshots. Mid to high handicap golfers will find that the Slingshots offer an easy to hit club with clean lines at address. Low handicap golfers might find the 2 and 3 irons of the set as nice replacements for their current long irons. All in all, we were impressed with the Slingshots and feel that they will do very well in the game improvement category.
